

CUMULATIVE SUBJECT INDEX¹

Volumes 68-71

A

Aggregation

- problems, formulation of several versions, analysis from recursion theoretic point of view, **70**, 69

Algorithms

- for circular retrieval and k -nearest neighbor search problems, description and analysis, **68**, 105
- for computing properties and functions of n -node forest stored in processor mesh, **69**, 168
- deterministic, applications to optimal parallel list ranking, **70**, 32
- network resource allocation, probabilistic analysis, **68**, 47
- optimally data-efficient, for isomorphism inference: time, space, and data complexity, **68**, 207
- pre-analysis locking, description, **70**, 193
- probabilistic, in complexity class BPP, characterization, **69**, 125
- for sorting Jordan sequences in linear time, description, **68**, 170

Approximations

- inductive inference, **70**, 156

Automata

- systolic trellis: stability, decidability, and complexity, **71**, 218
- theoretical characterization of OI-hierarchy, **71**, 1

B

Bounds

lower

- exponential, for real-time branching programs, **71**, 87
- simplified, for on-line recognition of words in context-free language, **69**, 255

- superexponential, derivation for Gröbner bases and Church-Rosser commutative Thue systems, **68**, 196

- upper, for neighbor searching, modification, **68**, 105

Branching programs

- real-time, exponential lower bound for, **71**, 87

Branching time

- temporal logics, probabilistic propositional temporal logic based on, description of two versions, **70**, 97

C

Calculus

lambda

- and categorical combinatory logic, syntactic equivalence theorem, **69**, 188
- model construction, applications of retraction map categories, **71**, 33
- relational, polynomial time computable queries expressible in, characterization, **68**, 86

Categories

- retraction map, applications to construction of lambda calculus models, **71**, 33

Circuits

- constant-depth polynomial-size, definability by, **70**, 216

Complexity

- boundary node label controlled graph grammars, **69**, 136
- computational, open problems, arithmetic theories, **69**, 1
- data, space, and time, optimally data-efficient isomorphism inference algorithm, **68**, 207
- inductive inference, **69**, 12
- polynomial cores for intractable sets, **70**, 54
- systolic trellis automata, **71**, 218

¹ Boldface number indicates appropriate volume; lightface number indicates pagination.

Complexity classes

- BPP, characterization, **69**, 125
- exponential and probabilistic, relativized, comparison, **71**, 231
- reversal-space-, time-reversal-, and time-space-bounded, for nondeterministic single worktape Turing machines, **70**, 179

Congruence

- observational, on finite terms of CCS, modal characterization, **68**, 125

Constraints

- on null values, in database relations, **70**, 1

D

Database systems

- relational model: functional dependencies and constraints on null values, **70**, 1

Decidability

- systolic trellis automata, **71**, 218

Definability

- by constant-depth polynomial-size circuits, **70**, 216

Definitions

- functions, use of term rewriting and applicative programming, **71**, 186

Density

- polynomial cores for intractable sets, **70**, 54

Dependencies

- functional, in database relations, **70**, 1

E

Emulations, *see also* Simulations

- cube, ring, shuffle-exchange, and two-dimensional grid networks, **71**, 143

Equivalence

- syntactic, establishment between categorical combinatory logic and lambda calculus, **69**, 188

F

Finite terms

- CCS, observational congruence, modal characterization, **68**, 125

Functions

- definition and evaluation, use of term rewriting and applicative programming, **71**, 186
- higher type, specifications, theories, and models with, mathematical foundations, **68**, 1
- partial recursive, identifiable sets, position of corresponding index sets in arithmetical hierarchy, **68**, 185
- symmetric, computable by constant-depth polynomial-size sequences of boolean circuits, characterization, **70**, 216

G

Generators

- two-way random, characterization, and impossibility of deterministic poly-space simulation, **71**, 131

Grammars

- attribute, machines for, description, **69**, 41
- graph, boundary node label controlled, basic definitions, normal forms, and complexity, **69**, 136

Graphs

- boundary node label controlled grammars, basic definitions, normal forms, and complexity, **69**, 136
- succinct representations, **71**, 181

Gröbner bases

- superexponential lower bound derivation, **68**, 196

H

Hierarchies

- arithmetical, position of index sets corresponding to identifiable partial recursive function sets, **68**, 185
- OI-type, automata-theoretical characterization, **71**, 1

I

Inference

- inductive
 - of approximations, **70**, 156
 - complexity, **69**, 12

- isomorphism, optimally data-efficient algorithm: time, space, and data complexity, **68**, 207
- Isomorphisms
 - optimally data-efficient inference algorithm: time, space, and data complexity, **68**, 207

L

- Languages
 - context-free, simplified lower bound for on-line recognition of words, **69**, 255
 - modal, for characterization of observational congruence on finite terms of CCS, **68**, 125
- Lists
 - ranking, optimal parallel, applications of deterministic coin tossing, **70**, 32
- Liveness properties
 - while**-programs, syntax-directed analysis, **68**, 223
- Locking
 - pre-analysis, description, **70**, 193
- Logic
 - categorical combinatory, and lambda calculus, syntactic equivalence theorem, **69**, 188
 - probabilistic propositional temporal, description of two versions based on temporal logics of branching time, **70**, 97
 - synchronization tree, for non-deterministic programs and specifications, **68**, 254

M

- Machines
 - for attribute grammars, description, **69**, 41
 - Turing, *see* Turing machines
- Models
 - higher type, mathematical foundations, **68**, 1
 - ideal, for recursive polymorphic types, **71**, 95
 - lambda calculus, construction, applications of retraction map categories, **71**, 33

N

- Networks
 - large, simulation on smaller networks, **71**, 143
 - processor, solution of game tree problems, **69**, 168
 - resource allocation algorithm, probabilistic analysis, **68**, 47
- Null values
 - constraints on, in data base relations, **70**, 1

O

- Operators
 - polynomial jump, definition, **68**, 146

P

- Polynomial cores
 - for intractable sets, density and complexity, **70**, 54
- Polynomial time
 - relational queries computable in, characterization, **68**, 86
- Probabilistic analysis
 - network resource allocation algorithm, **68**, 47
- Problems
 - aggregation, formulation of several versions, analysis from recursion theoretic point of view, **70**, 69
 - computational complexity, arithmetic theories, **69**, 1
 - game tree, solution on interconnected processor array, **69**, 168
 - list ranking, applications of deterministic coin tossing, **70**, 32
 - search, circular retrieval and k -nearest neighbor, algorithm description and analysis, **68**, 105
- Processors
 - interconnected, solution of game tree problems, **69**, 168
- Programs
 - branching, *see* Branching programs
 - non-deterministic, and specifications, synchronization tree logic for, **68**, 254

- term rewriting and applicative, in definition and evaluation of functions, **71**, 186
 - while**-, liveness properties, syntax-directed analysis, **68**, 223
- Q
- Queries
 - relational, computable in polynomial time, characterization, **68**, 86
- R
- Ranking
 - lists, optimal parallel, applications of deterministic coin tossing, **70**, 32
 - Reducibility
 - infinite sequences to random infinite sequences, **70**, 186
 - Representations
 - graphs, in exponentially succinct way, **71**, 181
 - Resources
 - in distributed network, allocation algorithm, probabilistic analysis, **68**, 47
 - Reversal
 - and space and time, simultaneous relations, for nondeterministic single worktape Turing machines, **70**, 179
- S
- Sequences
 - infinite, reducibility to random infinite sequences, **70**, 186
 - Jordan, sorting in linear time with level-linked search trees, **68**, 170
 - Sets
 - identifiable partial recursive functions, position of corresponding index sets in arithmetical hierarchy, **68**, 185
 - intractable, polynomial cores for, density and complexity, **70**, 54
 - Simulations, *see also* Emulations
 - deterministic poly-space, of two-way random space, impossibility, **71**, 131
 - large networks on smaller networks, **71**, 143
 - Sorting
 - Jordan sequences in linear time with level-linked search trees, **68**, 170
 - Space
 - and time and reversal, simultaneous relations, for nondeterministic single worktape Turing machines, **70**, 179
 - two-way random, deterministic poly-space simulation, impossibility, **71**, 131
 - Specifications
 - higher type, mathematical foundations, **68**, 1
 - non-deterministic programs, synchronization tree logic for, **68**, 254
 - Stability
 - systolic trellis automata, **71**, 218
 - Syntax
 - directed analysis of **while**-program liveness properties, **68**, 223
- T
- Theories
 - arithmetic, for computational complexity problems, **69**, 1
 - higher type, mathematical foundations, **68**, 1
 - Thue systems
 - Church-Rosser, commutative, super-exponential lower bound derivation, **68**, 196
 - Time
 - branching, *see* Branching time
 - polynomial, *see* Polynomial time
 - and space and reversal, simultaneous relations, for nondeterministic single worktape Turing machines, **70**, 179
 - Trees
 - game, associated problems, solution on interconnected processor array, **69**, 168
 - Turing machines
 - nondeterministic single worktape: simultaneous relations among time, space, and reversal, **70**, 179
 - Types
 - recursive polymorphic, ideal model, **71**, 95
